

General Information

Protein Construction

A DNA sequence encoding the extracellular domain of Influenza A virus H1N1 (A/California/07/2009) (ACP44189.1) hemagglutinin (Met 1-Gln 529) (HA1+HA2, two amino acids deletion, uncleaved) was fused with a polyhistidine tag at the C-terminus.

Organism

H1N1

Expression Host

Human Cells

QC Testing

Purity

> 95 % as determined by SDS-PAGE

Endotoxin

< 1.0 EU per μg of the protein as determined by the LAL method

Stability

Samples are stable for up to twelve months from date of receipt at -70°C

Predicted N terminal

Asp 18

Molecular Mass

The secreted recombinant hemagglutinin of Influenza A virus (A/California/07/2009(H1N1))

comprises 521 amino acids with the predicted molecular mass of 59 kDa. As a result of glycosylation, it migrates as an approximately 75-85 kDa band in SDS-PAGE under reducing conditions.

Formulation

Lyophilized from sterile PBS, pH 7.4

1. 5 % trehalose and mannitol are added as protectants before lyophilization.
2. Please contact us for any concerns or special requirements.

Usage Guide

Storage

Store it under sterile conditions at -20°C to -80°C . It is recommended that the protein be aliquoted for optimal storage. Avoid repeated freeze-thaw cycles.

Reconstitution

Adding sterile water, prepare a stock solution of 0.25 mg/ml. Concentration is measured by UV-Vis.
